HISTOPATHOLOGY REPORT

GROSS EXAMINATION:

Accession No. : S2554657A

Specimen: Resection of upper left end of tibia.

Gross: Resection specimen measures 18x5x2.5 cm comprising of proximal end of tibia with articular cartilage.

The ellipse of skin measures 2 x1 cm. It shows a scar measuring 0.5 cm.

Cut section shows a solid-cystic grey white tumor measuring 3 x 2.5 x 2 cm in the diaphysis.

Growth plate is involved by tumor. Articular cartilage is free of tumor. Focal cortical breach present and adjacent soft tissue is involved.

The tumor is 1cm away from the proximal articular cartilage, 1 cm from the nearest skin, 0.2 cm away from the nearest peripheral soft tissue margin.

Distal bone resected margin 12.5 cm.

Distances of tumor from the peripheral margins:

The tumor is 1 cm away from the anterior, 0.2 cm from posterior, 0.1 cm from medial, and 0.8 cm from lateral resection margin.

MICROSCOPIC EXAMINATION:

Multiple sections form the tumor bed area shows residual osteosarcoma in 1-2% of tumor bed area with osteoid deposition.

Rest of the tumor bed area shows extensive hyalinization, fibrosis and necrosis (95%).

There is focal cortical breech and extension into surrounding soft tissue.

Lymphovascular invasion is not identified in the sections examined.

All the resected margins including anterior, posterior, medial and lateral soft tissue resected margin are free of tumor.

Sections form scar shows dermal fibrosis. No tumor deposits seen.

Distal bone resected resected margin are free of tumor. Proximal articular cartilage is free of tumor.

Impression: Residual Osteosarcoma, left proximal tibia.

Note: Patient is a known case of Osteosarcoma, post chemotherapy- vide clinical history and histopath accession S2532330

DIAGNOSIS:

S2554657A	Tumor Tissue for HPE	Left proximal tibia	• Residual osteosarcoma
